

## DESKTOP TO DISK DRIVE VIRTUALIZATION

When teamed with Citrix virtualization technologies, Compellent's easy-to-use, virtualized storage area network (SAN) helps you make the most of your staff, storage and replication resources—enabling you to save today and in the future. Compellent is certified Citrix Ready, so you can trust that the Compellent SAN will enhance your entire Citrix virtual infrastructure.

## Consolidate Your Resources with Virtualization

### Shrink Your Footprint for a Big Impact

Combine Compellent's advanced storage virtualization with Citrix XenApp, XenServer and XenDesktop software for a complete end-to-end virtualization solution that can reduce the data center footprint by up to 92 percent and help you save significantly on hardware, energy expenses, and CO<sub>2</sub> emissions.

### Pool Your Resources

Easily allocate volumes for virtual servers and only consume capacity when data is actually written. Compellent's Thin Provisioning combines with Citrix Provisioning Server to create a flexible pool of server and storage resources that can be matched to changing application demands.

## Make the Most of Your Current Assets

### Manage More Storage with Less Effort

Automated Tiered Storage tracks blocks "inside the volume" and migrates inactive data to less expensive storage, allowing you to leverage the ideal mix of disks for your data center without manual data classification and migration.

### Maximize Your Bandwidth

Compellent's bandwidth simulation allows you to make accurate bandwidth purchases by estimating requirements based on actual data. Save big on bandwidth using XenApp's WAN optimization tool to reduce usage by up to 70 percent.

### Increase Availability

Deliver high availability by creating fault tolerant, secure-access virtual storage volumes and using Compellent Replays (snapshots) to recover data within seconds. Take Replays of server volumes without taking applications offline. Migrate a virtual server between hosts without interrupting critical applications using XenMotion.

## Get the Flexibility You Need for the Future

### Keep Your Options Open

Compellent's open and flexible storage design is ideally suited for Citrix XenServer—helping you take control of your data center without fear of technology lock-in.

### Take the Guess Work Out of Growth

Compellent's modular hardware architecture and advanced Thin Provisioning capabilities increase utilization and eliminate allocated but unused storage, allowing you to delay storage purchases. Citrix Provisioning Server allows seamless as-you-grow server expansions.

"Using Compellent as the focal point in the background for our virtualization strategy and combining it with XenServer on the front end has made going from physical to virtual and virtual to virtual a reality in our data center."
